7. Reports and Agent Performance
8. Agents Management
9. Settings and Configuration
10. Role-Based Permissions
11. UI Design System
12. Backend Access Rules
13. Final Summary

This document summarizes the agreed Phase 1 CRM scope in a professional format for team alignment, product planning, UI design, and development handoff.

1. Project Overview

Aureum Sales CRM is a custom real-estate sales management system designed for Aureum Mall & Residences. The CRM will help the sales team manage leads, customers, follow-ups, internal communication, agent performance, and sales reporting in one centralized platform.

The goal is to replace scattered lead handling through WhatsApp messages, spreadsheets, manual notes, and informal communication with a structured, professional, and trackable sales process.

Core sales journey: Lead -> Customer -> Follow-up -> Communication -> Negotiation -> Booking -> Closed Deal

2. Main Purpose and Business Outcome

The CRM is intended to improve sales visibility, team accountability, and follow-up discipline. It should give managers and agents a clear operating system for daily sales activity.

- Manage all sales leads in one place.
- Assign leads to the right sales team members.
- Track customer follow-ups and next actions.
- Monitor agent performance and activity.
- View sales reports and conversion progress.
- Communicate internally through team chat.
- Reduce missed follow-ups and improve lead conversion.

3. CRM User Roles

The CRM will use three main roles only. Each role has different screen access, data visibility, and action permissions.

Super Admin Full CRM control. Can view company-level data, manage agents, access reports, and control system settings.	Sales Manager Operational sales control. Can manage leads, customers, follow-ups, reports, agents, and team activity. No access to Settings.
Sales Agent Own work only. Can manage assigned leads, assigned customers, own follow-ups, and team chat. No access to All Leads, Add New Lead, Reports, Agents, or Settings.	

Role-Based Screen Access Matrix

Screen	Super Admin	Sales Manager	Sales Agent
Dashboard	Yes	Yes	Yes
All Leads	Yes	Yes	No
My Leads	Yes	Yes	Yes
Add New Lead	No sidebar item	Yes	No
Customers	Yes	Yes	Own only
Follow-ups	All	Team	Own only
Team Chat	Yes	Yes	Yes
Reports	Yes	Yes	No
Agents	Yes	Yes	No
Settings	Yes	No	No

4. Final Phase 1 Screen Scope

The Phase 1 CRM will focus on the most important operational screens needed for sales management and day-to-day use.

#	Screen	Purpose
1	Login Screen	Secure access and role-based redirection.
2	Dashboard Screen	Sales overview, KPIs, charts, recent leads, and follow-up visibility.
3	All Leads Screen	Company/team lead management for Super Admin and Sales Manager.
4	My Leads Screen	Assigned leads for the logged-in user.
5	Add New Lead Screen	Manual lead entry for Sales Manager.
6	Customers Screen	Customer profile list and quick access to details.
7	Customer Detail Drawer	Right-side drawer for customer info, notes, timeline, and actions.
8	Follow-ups Screen	Daily, overdue, upcoming, completed, missed, and rescheduled follow-ups.
9	Internal Team Chat Screen	Internal team channels and direct messages.
10	Agent-wise Reports Screen	Agent performance, conversion, follow-up and lead reporting.
11	Agents Management Screen	Agent/team user management.
12	Settings Screen	Super Admin configuration for CRM settings.

Not included in Phase 1: Projects Screen, Properties / Units Screen, Visits Screen, Tasks Screen, Meetings Screen, and full complex opportunity pipeline system.

5. Screen-by-Screen Functional Scope

Login Screen

Allows users to securely access the CRM. After login, the system identifies the role and redirects the user to the correct dashboard. Users can be Super Admin, Sales Manager, or Sales Agent.

Dashboard Screen

Provides a graph-focused overview of total leads, new leads, hot leads, follow-ups due, active customers, closed deals, lead sources, agent performance, conversion overview, recent leads, and today's follow-ups. Data visibility changes by role.

All Leads Screen

Used by Super Admin and Sales Manager to view and manage company or team leads. It includes search, filters, status tabs, agent assignment, status changes, and follow-up creation. Sales Agents cannot access All Leads.

My Leads Screen

Shows leads assigned to the logged-in user. Sales Agents use this as their main lead management screen for calls, WhatsApp, notes, follow-ups, and status updates.

Add New Lead Screen

Available to Sales Manager. Used to manually add leads from Website, WhatsApp, Facebook, Sales Partner, Walk-in, Referral, or Manual Entry. Sales Agents cannot access this screen.

Customers Screen

Shows customer profiles, contact details, interest, budget, assigned agent, status, last activity, and next follow-up. Sales Agents can only see assigned customers.

Customer Detail Drawer

Opens from the right side when a customer is clicked. It shows customer info, interest details, notes, timeline, follow-up history, and quick actions like Call, WhatsApp, Add Note, Schedule Follow-up, Change Status, and Edit Details.

Internal Team Chat Screen

For internal communication between Super Admin, Sales Manager, and Sales Agents. It includes channels, direct messages, text messages, file attachments, unread counts, timestamps, and online/offline status.

6. Follow-up Management System

The Follow-ups Screen is one of the most important parts of the CRM. A follow-up is the next action required with a lead or customer. It keeps the team accountable and prevents missed customer communication.

Definition: Follow-up = next action with a lead or customer.

Follow-up Examples

- Call customer.
- Send WhatsApp message.
- Send email.

- Follow up about payment plan.
- Follow up about booking decision.
- Remind customer after visit.
- General customer follow-up.

Follow-up Screen Should Show

- Today's follow-ups.
- Overdue follow-ups.
- Upcoming follow-ups.
- Completed follow-ups.
- Missed follow-ups.
- Rescheduled follow-ups.

Follow-up Filters and Fields

Area	Items
Date filters	Today, Tomorrow, This Week, This Month, Overdue, Custom Date Range, Calendar View
Advanced filters	Assigned Agent, Follow-up Status, Follow-up Type, Lead Status, Priority, Source
Types	Call, WhatsApp, Email, Payment Plan Follow-up, Booking Follow-up, Site Visit Reminder, General Follow-up
Statuses	Pending, Completed, Overdue, Missed, Rescheduled, Cancelled
Table columns	Customer Name, Phone/WhatsApp, Type, Agent, Lead Status, Due Date, Due Time, Priority, Status, Last Activity, A
Actions	Open Customer, Call, WhatsApp, Mark Done, Reschedule, Add Note

Role Behavior for Follow-ups

- Super Admin can see all follow-ups.
- Sales Manager can see team follow-ups and filter by agent.
- Sales Agent can see only own assigned follow-ups, mark them done, reschedule them, and add notes.

7. Reports and Agent Performance

The Reports Screen focuses on agent-wise sales performance. It is visible only to Super Admin and Sales Manager. Sales Agents cannot access Reports.

Agent-wise Report Metrics

- Total agents and active agents.
- Leads assigned and contacted leads.
- Hot leads and follow-ups completed.
- Overdue follow-ups and missed follow-ups.

- Closed deals and lost leads.
- Conversion rate and last activity.

Agent Performance Table

Column	Purpose
Agent Name	Identify the sales team member.
Team	Show which team the agent belongs to.
Assigned Leads	Total leads assigned to the agent.
Contacted Leads	Leads the agent has contacted.
Follow-ups Completed	Completed follow-up workload.
Overdue Follow-ups	Follow-ups needing manager attention.
Closed Deals	Successful deal closures.
Conversion Rate	Performance quality indicator.
Last Activity	Recent CRM activity status.

Clicking an agent row opens the Agent Detail Drawer from the right side. The drawer shows overview, leads, follow-ups, customers, and activity tabs.

8. Agents Management

The Agents Management Screen allows Super Admin and Sales Manager to view and manage sales users. It is hidden from Sales Agents.

Agents Table Should Show

- Agent name and contact details.
- Team and role.
- Assigned leads and active leads.
- Closed deals and follow-ups due.
- Status and last activity.
- Actions such as View Agent, Edit Agent, Assign Team, View Leads, View Report, and Deactivate.

Add Agent Form

The Add Agent form may include Full Name, Phone, Email, Role, Team, Password or Invite User, and Status. Allowed roles are Sales Manager and Sales Agent. No extra Admin role should be added.

9. Settings and Configuration

The Settings Screen is visible only to Super Admin. It is used for system-level CRM configuration and should not be visible to Sales Manager or Sales Agent.

Company Settings Company name, CRM name, logo, email, phone, address, timezone, and currency.	Role & Permission Settings Controls for Super Admin, Sales Manager, and Sales Agent permissions.
Lead Status / Tags Settings Manage lead statuses such as New, Hot, Follow-up, Booking, Closed Won, and Closed Lost.	Lead Source Settings Manage sources such as Website, WhatsApp, Facebook, Sales Partner, Walk-in, Referral, and Manual Entry.
Notification Settings Controls for lead assignment, follow-up reminders, overdue follow-ups, chat messages, and status changes.	CRM Preferences Default lead status, default source, dashboard range, currency, and timezone.

10. Role-Based Permissions

Action	Super Admin	Sales Manager	Sales Agent
View Dashboard	Yes	Yes	Yes
View All Leads	Yes	Yes	No
View My Leads	Yes	Yes	Yes
Add New Lead	Optional inside All Leads	Yes	No
Edit Lead	Yes	Yes	Own only
Assign / Reassign Lead	Yes	Yes	No
Change Lead Status	Yes	Yes	Own only
View Customers	All	All / Team	Own only
Create Follow-up	Yes	Yes	Own only
Mark Follow-up Done	Yes	Yes	Own only
Team Chat	Yes	Yes	Yes
View Reports	Yes	Yes	No
Manage Agents	Yes	Yes	No
Access Settings	Yes	No	No

Simple rule: Sidebar decides what the user sees. Permissions decide what the user can do. Backend APIs must enforce both.

11. UI Design System

All CRM screens must follow the same Aureum design system. The visual style should feel premium, professional, clean, elegant, and real-estate focused. The CRM should feel like a luxury sales command center, not a generic SaaS admin panel.

Design Element	Direction
Main background	Warm cream / ivory
Cards	White or soft beige with thin champagne gold borders
Sidebar	Dark charcoal / deep brown with gold active states
Accent color	Champagne gold
Typography	Elegant serif headings and modern sans-serif UI text
Tables	Clean white table cards with gold accents and readable spacing
Buttons	Primary gold buttons, secondary cream buttons with gold border
Avoid	Bright blue, purple, neon colors, overloaded dashboards, public website navigation, signup-style layouts

12. Sidebar and Backend Access Rules

Role-Based Sidebar

Role	Sidebar Items
Super Admin	Dashboard, All Leads, My Leads, Customers, Follow-ups, Team Chat, Reports, Agents, Settings
Sales Manager	Dashboard, All Leads, My Leads, Add New Lead, Customers, Follow-ups, Team Chat, Reports, Agents
Sales Agent	Dashboard, My Leads, Customers, Follow-ups, Team Chat

Backend Protection Rules

- Sales Agent cannot access All Leads API.
- Sales Agent cannot create a new lead.
- Sales Agent cannot view another agent's customer.
- Sales Agent cannot access reports, agents management, or settings.
- Sales Manager cannot access Settings API.
- Users should only access data allowed by their role and ownership level.

13. Final Summary

Aureum Sales CRM Phase 1 will be a professional, role-based real-estate sales management system for Aureum Mall & Residences. It will focus on the most important sales operations: leads, customers, follow-ups, team chat, reports, agents, and settings.

The CRM will be simple enough for daily team use, but professional enough to support management visibility, role-based control, and future expansion. The final system should feel like a luxury real-estate sales command center built specifically for Aureum's sales team.

Phase 1 outcome: a clean CRM where the team can log in by role, manage leads and customers, complete follow-ups, communicate internally, review reports, manage agents, and control system settings through Super Admin.

Recommended Next Steps

Step	Description
1. UI Design Completion	Finalize Stitch/Figma screens using the Aureum CRM design system.
2. Database Structure	Define users, roles, leads, customers, follow-ups, messages, reports, and settings tables.
3. API Planning	Create secure endpoints for role-based data access and CRM actions.
4. Permission Testing	Test every role to make sure restricted screens, buttons, and APIs are blocked.
5. Phase 1 Development	Build core CRM modules first: login, dashboard, leads, customers, follow-ups, reports, agents, and settings.

This document can be used as the working reference for design handoff, development planning, and internal sales team alignment.
